

LUBRICATION DEVICE

Abstract

Method and arrangement for providing a device for delivering lubricant (10a, 10b) to at least one lubrication point (17) and which includes a reservoir (9) for lubricant (10a, 10b) connected to the lubrication point (17) via a valve arrangement (16). The device includes a controller of the valve arrangement (16), depending on the pressure in an hydraulic circuit (26) connected to the device. The invention provides an improved device for the efficient delivery of lubricant to a lubrication point.
